

Automotive Coolant Radiator Hose

This radiator hose facilitates coolant circulation in vehicle engines. Constructed from durable rubber, it withstands high-temperature and high-pressure environments.

Product Overview

High-Performance Automotive Coolant Hoses

These professional-grade automotive hoses are engineered for reliability in demanding engine cooling, fuel, and transmission systems. Constructed from high-quality elastomers including EPDM and Silicone, they offer superior resistance to heat, chemicals, and pressure. With customizable shapes and sizes available, these hoses are built to support diverse automotive engineering requirements.

Material & Construction

Materials	EPDM, NBR, NBR/PVC, CSM, CR, Silicone
Hardness	75 Shore A
Surface Finishing	Texture

Applications & Compatibility

Engineered For

- Engine cooling system
- Fuel system
- Skylight system
- Air-conditioning and refrigeration
- Transmission cooling system
- Engine intake system

Manufacturing

Quality Certifications

TS16949 • 3C

OEM/Customization	Yes
