

Automotive Cooling Fan Blade

This multi-blade fan is designed for automotive cooling systems. It features a central hub with multiple evenly spaced blades to provide efficient airflow for engine temperature regulation.

Product Overview

High-Performance Automotive Cooling Fan

This automotive cooling fan blade is engineered for optimal engine temperature regulation and efficient airflow. Constructed from durable, high-quality plastic materials, it is designed to withstand the rigors of high rotational speeds and thermal variations. Its precision-engineered geometry ensures maximum cooling efficiency while maintaining reliable operation within the vehicle's cooling system.

Technical Specifications

Material	PP (Polypropylene)
OEM Reference	11521712058
Application	Automotive Cooling System
