

Automotive Cooling Fan Motor

This high-performance fan motor is designed for automotive applications. The motor ensures optimal performance in demanding conditions with its durable construction and efficient cooling capabilities.

Overview

High-Performance Automotive Cooling

This automotive cooling fan motor is engineered for durability and efficient cooling, ensuring optimal performance in demanding conditions. It features a robust construction with a precision-balanced rotor for smooth and quiet operation. Designed for reliability, it provides effective temperature management and includes an electrical connector for easy installation.

Technical Specifications

Power Output

80 W
Power

Model

CF-90

Voltage Compatibility

12V, 24V
