

Automotive Cooling System Water Pump

This high-performance water pump is designed for automotive cooling systems. It is constructed for efficient coolant circulation, maintaining optimal engine temperature.

Product Overview

High-Performance Cooling Solution

This automotive water pump is engineered for efficient coolant circulation, ensuring optimal engine temperature management under demanding conditions. Constructed for durability and heat dissipation, the unit features an optimized impeller design for high flow rates. It includes multiple mounting points for secure installation and precise alignment, making it a reliable component for enhanced cooling systems.

Technical Specifications

Key Features

- Optimized impeller design for high flow
- Durable aluminum construction
- Multiple mounting points for secure alignment
- Standard pulley hub compatibility

Part Number	HCC9212
Material	Aluminum
Application	Automotive, Cooling System
