Product Overview

Precision Engineered Door Lock Actuators

This automotive door lock actuator is an electromechanical device designed for the reliable locking and unlocking of vehicle doors. Engineered with a robust combination of durable plastic and metal components, it ensures longevity and consistent performance. The assembly features an integrated electrical connector for seamless integration with central locking systems, providing smooth, quiet operation to enhance vehicle security.

Technical Specifications

Manufacturing Experience

1984 Year

Manufacturing Since

Materials	Durable Plastic, Metal Components
Noise & Vibration Control	Yes

Compatibility

Compatible Vehicle Makes

- BMW
- Mercedes-Benz
- Volkswagen
- GM
- Ford
- Chrysler
- Toyota
- Honda
- Nissan
