

Automotive Drive Shaft

This drive shaft is designed for efficient power transmission in automotive applications. It features durable construction, precision engineering, and reliable performance.

Overview

High-Performance Automotive Drive Shaft

This drive shaft is engineered for efficient power transmission and reliable performance in automotive applications. Manufactured to meet or exceed OEM specifications, it ensures a precise fit and long-lasting operation for the vehicle's drivetrain. The assembly includes protective boots to prevent contamination and maintain essential lubrication, significantly extending the service life of the component.

Compatibility

Vehicle Compatibility

- Ranger (2012 models)

OEM Reference Numbers

UC9T2550XA, UC9T2560XA

Technical Features

Construction Quality

Precision Engineered • Durable Construction • OEM Standard

Performance Category

1 Grade

Drivetrain Reliability

Protection Features

Integrated protective boots for contamination prevention and lubrication maintenance
