

# Automotive Driveshaft Center Support Bearing

This center bearing assembly is designed for automotive applications. It provides support and reduces vibration in multi-piece driveshafts.

## Product Overview

### Precision Driveline Support

This center bearing assembly is engineered for automotive applications, providing essential support to multi-piece driveshafts. It features a robust metal housing paired with a durable rubber isolator to effectively reduce vibration and ensure smooth driveline operation. Designed for longevity in demanding driving conditions, this component is an ideal solution for aftermarket service and automotive maintenance.

## Technical Specifications

### System Compatibility

Tyre Systems • Drivetrain

Application	Automotive Driveline
Key Features	Robust Metal Housing, Rubber Isolator, Precision Bearing, Vibration Reduction
Primary Use	Aftermarket Auto Parts
