Product Overview

High-Performance Headlight Modification

This dual-xenon headlamp assembly is engineered for automotive headlight modification, offering advanced lighting technology for enhanced visibility. Designed for durability and optimal thermal management, the assembly features integrated heat sinks and robust construction. It supports a range of high-tech functions including steering assist, high-speed brightening, and automatic light switching, providing a significant upgrade for vehicle aesthetics and safety.

Technical Features

Key Functions	Steering Assist, High-Speed Brightening, Rain/Fog Mode, Automatic Light Switching, Blue Function Unlock
Thermal Management	Yes

Compatibility & Installation

Compatibility

- Compatible with various vehicle models
- Includes electrical connectors for existing wiring systems
- Multiple mounting points for secure installation

Installation Method	Lossless docking with provided modules and extension cables
---------------------	---

Logistics & Service
