

Automotive Electric Fuel Pump Module

This electric fuel pump module is designed for automotive applications. It delivers fuel from the fuel tank to the engine at the required pressure and flow rate.

Product Overview

Precision Engineered Fuel Delivery

This automotive electric fuel pump module is designed for reliable performance in demanding vehicle conditions. Each unit is precisely manufactured and undergoes 100% testing to ensure consistent quality. The module integrates essential fuel delivery components to maintain optimal pressure and flow rates, supporting efficient engine operation.

Performance Metrics

Performance Specifications

3 Bar

Operating Pressure

105 L/h

Flow Rate

Compatibility & Reference

Part Numbers

- EFM0940912
- EFP382601G

Cross Reference

92159902

Compatible Make

Holden

Quality & Standards

Certifications

TUV • ISO/TS 16949:2002 • CE
