

# Automotive Electrical Components for Vehicle Systems

These automotive electrical components are essential for various vehicle systems. They include motors and actuators used in functions like window operation, windshield wiping, and other electromechanical tasks.

## Product Overview

### Automotive Electrical Components

This collection features a comprehensive range of automotive electrical components designed for essential vehicle systems. These electro-mechanical parts, including various motors and actuators, are engineered to support critical functions such as window operations and windshield wiping systems. Built for durability and performance, these components are ideal for professional automotive repair and maintenance applications.

## Technical Specifications

### Component Types

- Motors
- Actuators

### Available Series

ZD 126, ZD 128, ZD 130, ZD 131

### Primary Application

Transportation and Vehicle Systems
