

Automotive Electromagnetic Switch

This high-current electromagnetic switch is designed for automotive and industrial applications. It features robust construction with heavy-duty terminals for reliable electrical connections.

Product Overview

High-Performance Electromagnetic Switch

This electromagnetic switch is engineered for demanding automotive and industrial applications, serving as a reliable solution for switching high-amperage circuits. Built with robust materials, including corrosion-resistant housing and copper terminals, it ensures enhanced conductivity and long-lasting performance in harsh environments. Its compact design and versatile mounting options allow for easy integration into starter systems and various vehicle configurations.

Technical Specifications

Key Features

- High-current capacity
- Corrosion-resistant housing
- Copper terminals for enhanced conductivity
- Heavy-duty construction
- Compact design

Included Hardware

- Mounting bracket
- Nuts
- Washers

Primary Application

Automotive, Industrial, Starter Systems

Performance Metrics

Durability

Corrosion Resistant • Heavy-Duty
