Product Overview

High-Performance Automotive Air Filtration

This high-performance engine air filter is engineered to provide superior protection by effectively trapping dust, pollen, and other airborne contaminants. Designed for durability and efficiency, it maintains optimal air flow to the engine, which helps in preserving fuel efficiency and extending the overall service life of the engine. Built to meet rigorous international quality standards, it serves as a reliable component for diverse automotive maintenance needs.

Quality Certifications

ISO/TS16949 Certified

Technical Details

Reference Part Numbers

- TA7881
- 17801-OP020

Contaminants Filtered

Dust • Pollen • Airborne Contaminants

Primary Function

Engine air intake filtration and contaminant removal
