Product Overview

High-Performance Automotive Fuel Pump

This automotive engine fuel pump is engineered for consistent and reliable fuel delivery, making it an ideal choice for both stock and modified engine applications. Featuring a durable metallic housing and an integrated pulley system, it ensures efficient power transfer and long-term performance under various operating conditions. The design prioritizes ease of installation and maintenance, providing a robust solution for demanding automotive environments.

Technical Specifications

Construction Features

- Durable metallic housing
- Integrated pulley system for power transfer
- Multiple secure mounting points
- Protective inlet/outlet covers
