

Automotive Engine Oil Pump

This high-volume oil pump is designed for automotive engines. It features precision-machined gears for efficient oil delivery and durable construction for long-lasting performance.

Product Overview

High-Performance Automotive Oil Pump

This high-volume oil pump is engineered for demanding automotive engine applications where consistent lubrication and pressure are critical. Featuring a robust housing and precision-machined internal gears, it ensures efficient oil delivery and long-lasting durability. Designed for secure installation, this component is an ideal solution for engines requiring enhanced flow performance.

Technical Specifications

Operational Metrics

0.1005 mm

Tolerance/Clearance

12 pcs

Mounting Points

Construction Material

Cast Iron

Key Features

High-Volume Delivery, Precision-Machined Gears, Robust Housing, Integrated Gear Design

Application & Compatibility

Application Suitability

- Automotive engines
- High-pressure lubrication systems
- Standard replacement applications
