

Automotive Engine Oil Pump

This high-pressure oil pump is designed for efficient lubrication in automotive engines. It features precision-machined components and a robust aluminum alloy housing for consistent oil pressure and long-lasting performance.

Product Overview

High-Performance Engine Lubrication

This high-pressure oil pump is engineered for efficient lubrication in automotive engines, ensuring consistent oil flow and pressure regulation. Constructed from durable cast aluminum alloy, it offers enhanced strength and corrosion resistance for extended service life. The unit features precision-machined components and is designed to meet or exceed OEM specifications for reliable performance in various automotive applications.

Technical Specifications

Key Features

- Precision-machined gears
- Integrated oil filter adapter
- Integrated oil filter bypass
- Multiple mounting points
- High-quality oil seal

Material

Cast aluminum alloy

Performance Metrics

Performance Highlights

1 High

Corrosion Resistance

1 Yes

OEM Specification Compliance

Compatibility & Installation

Installation Notes

Versatile installation, Multiple mounting points, Leak-free operation
