## Product Overview

### Precision Airflow Management

This electronic throttle body is precision-engineered to provide optimal airflow control for automotive engines. Constructed from a durable aluminum alloy, it ensures long-term reliability and consistent performance under various operating conditions. The unit features an integrated electronic actuator for highly responsive throttle adjustments, helping to improve overall engine efficiency and fuel economy.

## Technical Specifications

### Key Features

- Precision-machined bore for smooth response
- Integrated electronic actuator
- Butterfly valve air intake regulation
- Robust mounting flanges

OE Number	04891735AC
Housing Material	Aluminum Alloy
Component Type	Electronic, Automotive
