

Automotive Exhaust Vibration Isolation Hanger

This rubber exhaust hanger isolates vibrations and reduces noise in automotive exhaust systems. It is made of durable rubber and features two mounting holes for easy installation.

Product Overview

Vibration Isolation Solution

This automotive exhaust vibration isolation hanger is engineered to effectively minimize noise and vibration transfer between the exhaust system and the vehicle chassis. Constructed from high-durability rubber, it provides the necessary flexibility and structural integrity to withstand harsh automotive environments. Its simple two-hole mounting design ensures straightforward installation, making it a reliable component for maintaining exhaust system stability.

Technical Specifications

Material	Durable Rubber
Mounting Configuration	Two-hole mount

Performance Features

Key Features	Vibration Isolation, Noise Reduction, High-Temperature Resistant, Durable Construction
