Overview

High-Performance Filtration

This automotive fuel filter element is engineered to provide optimal filtration by removing dirt, water, rust, and other contaminants from your fuel system. Designed with a robust construction and advanced pleated filter media, it ensures clean fuel delivery to protect critical engine components. The unit is built to meet or exceed OEM specifications for fit, form, and function, offering reliable performance and extended service life.

Technical Specifications

Included Components

- Filter Element
- Sealing Ring

Model Number

C-6098

Compatibility & Features

Automotive Application, OEM Compliant, Leak-Free Installation

Performance Metrics

Contaminant Removal

Dirt • Water • Rust • Particulates
