

Automotive Fuel Pump Assembly with Level Sensor

This fuel pump assembly delivers fuel from the fuel tank to the engine. It integrates a fuel level sensor, providing accurate fuel level readings.

Product Overview

Automotive Fuel Pump Assembly

This complete fuel pump assembly is engineered for automotive fuel delivery systems, ensuring consistent fuel flow from the tank to the engine at required pressures. The unit integrates a fuel pump, level sensor, float, filter, and electrical connectors into a single, durable housing. Designed for reliability and ease of installation, it features corrosion-resistant materials and flexible, kink-resistant fuel lines to support long-term vehicle performance.

Technical Specifications

Integrated Components

- Fuel Pump
- Fuel Level Sensor
- Float Arm
- Fuel Filter
- Electrical Connectors
- Corrugated Fuel Lines

Key Functions

Fuel Delivery • Fuel Level Sensing • Corrosion Resistant • Kink-Resistant Lines

Construction Materials

Durable Plastic, Metal Components
