

Automotive Fuel Pump Assembly

Complete fuel pump assembly designed for automotive fuel delivery systems. It ensures consistent fuel pressure and flow to the engine for optimal performance.

Product Overview

High-Performance Fuel Delivery

This automotive fuel pump assembly is engineered to provide consistent fuel pressure and flow to the engine, ensuring optimal performance for fuel injection systems. The unit is a complete, all-in-one solution that integrates the fuel pump, fuel level sender, filter, and reservoir into a single durable housing. Designed for longevity and reliability, it features corrosion-resistant construction and precise components for accurate fuel level readings.

Technical Specifications

Included Components

- Fuel pump
- Fuel level sending unit with float
- Fuel filter
- Reservoir
- Electrical connectors

Connections

- Supply fuel line
- Return fuel line
- Secure electrical connectors

Construction Materials

Durable Plastic, Metal Components, Corrosion Resistant
