

Automotive Hand Brake Valve

This hand brake valve is designed for automotive applications, featuring a lever for manual actuation. The valve is engineered to provide precise control over the braking force, enhancing safety and stability during operation.

Product Overview

Automotive Hand Brake Valve

This hand brake valve is engineered for reliable performance in automotive pneumatic braking systems. It features a robust, durable construction designed to withstand harsh operating conditions while providing precise control over braking force. The compact design and multiple port configuration ensure easy integration into various vehicle braking setups, enhancing overall safety and stability.

Technical Specifications

System Compatibility

Pneumatic Braking • Automotive

Key Features

- Durable construction
- Multiple port configuration
- Compact design
- Precise engagement control

Part Identification

WG9000360522/2, 00367, 151125110094

Actuation Mechanism

Manual lever with spherical knob
