

Automotive Heater Core

This heater core is designed for efficient heat transfer and reliable operation in automotive heating systems. It is constructed with durable materials for long-lasting performance and resistance to corrosion.

Product Overview

High-Performance Automotive Heater Core

This automotive heater core is engineered for efficient heat transfer and reliable operation within vehicle heating systems. Featuring a durable metal construction with optimized fin density, it maximizes surface area for superior heat exchange performance. Designed for durability and precise fitment, this unit ensures optimal passenger comfort in cold weather conditions while offering a compact, easy-to-install form factor.

Technical Specifications

Core Dimensions

337 mm
Length

154.5 mm
Width

26 mm
Thickness

Compatibility & Reference

Attribute	Detail
Vehicle Make	Hyundai
Reference Number	6270116

Design Features

Construction Highlights

- Durable metal construction
- Optimized fin density for heat exchange
- Compact, rectangular design
- Dual cylindrical port configuration
