

Automotive Heater Core

The automotive heater core is a radiator-like device that provides heat to the vehicle's passenger compartment. Hot coolant circulates through the core, and a fan blows air across it to transfer heat into the cabin.

Product Overview

Efficient Thermal Management

This automotive heater core is engineered for optimal heat transfer within the vehicle's climate control system. Designed to circulate hot engine coolant through a durable, corrosion-resistant core, it effectively warms the passenger cabin. Its compact, radiator-like construction ensures maximum surface area for efficient air heating, providing reliable performance for compatible Toyota Corolla models.

Technical Specifications

Core Dimensions

220 mm
Length

135 mm
Width

26 mm
Thickness

OEM Reference Number: 87107-12520

Product ID (TS): 6275007

Compatibility

Compatible Models

Model	Year Range
Toyota Corolla	1997-2002
Toyota Corolla Liftback	1997-2002
Toyota Corolla Compact	1997-2002
Toyota Corolla Wagon	1997-2001
