

Automotive Heater Core

This heater core is designed for efficient heat transfer and reliable operation in automotive heating systems. It is constructed with durable materials to withstand extreme temperatures and pressures, ensuring long-lasting performance.

Product Overview

High-Performance Automotive Heater Core

This automotive heater core is engineered for efficient heat transfer and reliable operation within vehicle climate control systems. Built with durable, corrosion-resistant materials, it is designed to withstand the high pressures and extreme temperature fluctuations typical of automotive environments. Its compact, standardized design ensures straightforward installation and broad compatibility with specific Hyundai vehicle models.

Technical Specifications

Core Dimensions

337 mm
Length

154.5 mm
Width

26 mm
Thickness

Cross Reference Numbers

Reference Type	Value
Nissens	6270116

Vehicle Compatibility	Hyundai
