

Automotive Hydraulic Shock Absorber

Hydraulic shock absorbers designed for automotive suspension systems. These components are engineered to dampen vibrations and oscillations, ensuring a smooth and controlled ride.

Overview

Automotive Hydraulic Shock Absorber

These hydraulic shock absorbers are specifically engineered for automotive suspension systems to provide superior dampening of vibrations and oscillations. Constructed with a robust design, they ensure a smooth and controlled driving experience even under harsh operating conditions. The assembly features high-quality rubber bushings that isolate noise and vibration, significantly enhancing vehicle stability and passenger comfort.

Technical Specifications

Key Components

- Cylindrical body construction
- Integrated mounting brackets
- Precision internal damping mechanism
- Noise-reducing rubber bushings

Application

Automotive Suspension

Model Identifiers

15311M, 7N1314
