

Automotive Ignition Coil

This ignition coil delivers increased spark energy and voltage output. Its optimized winding configuration improves engine performance for a range of automotive applications.

Product Overview

High-Performance Ignition Solution

This compact E-Core remote universal ignition coil is engineered to deliver superior spark energy and voltage output for high-distributor setups. Featuring a durable red housing designed for effective heat dissipation and corrosion resistance, it ensures reliable operation under demanding conditions. With optimized winding configurations and high-conductivity brass terminals, this component is an ideal upgrade for automotive applications requiring enhanced ignition consistency and improved fuel efficiency.

Technical Specifications

Housing Color

Red

Coil Type

E-Core Remote Universal

Key Features

High-Performance, Heat Dissipation, Corrosion Resistant, Optimized Winding

Construction & Materials

Design Benefits

- Enhanced conductivity via brass terminals
- Improved heat dissipation fins
- Compact form factor for versatile mounting
- Optimized internal winding configuration

Terminal Material

Brass
