

Automotive Intercooler for Turbocharged Engines

This intercooler is engineered to cool compressed air from turbochargers, enhancing engine performance. It features a durable core design with high thermal conductivity for optimal heat dissipation.

Product Overview

High-Performance Automotive Intercooler

This high-performance intercooler is engineered to enhance engine efficiency and power for turbocharged vehicles. By effectively cooling compressed air from the turbocharger, it increases air density and reduces intake temperatures, leading to improved combustion, horsepower, and throttle response. Constructed with a robust core and durable end tanks, this unit is designed to withstand high pressure and temperature conditions for reliable performance.

Compatibility & Identification

Compatible Vehicle	NISSAN NP300 NAVARA
OEM / Reference Number	56207

Technical Dimensions

Core Dimensions

540 mm
Core Length

157 mm
Core Height

Tank Dimensions	95/95*159 mm
