Product Overview

Automotive Needle Roller Bearing

This high-precision needle roller bearing is engineered to reduce rotational friction in demanding automotive applications. Featuring cylindrical rollers with a large contact surface area, it is specifically designed for bearing arrangements where radial space is limited. Built to meet international and domestic manufacturing standards, this component ensures reliable rotational support and consistent performance.

Dimensions

Bore Diameter	26 mm
Outer Diameter	47 mm
Width	88 mm

Compatibility

OE Reference Numbers

- 7700102090
- 7700864959
- 7701035378
- 7704001334

Quality Standards

Compliance	International Standards, Domestic Standards
