

Automotive Parts Spray Painting System

This industrial spray painting system is designed for coating automotive parts. The system applies a consistent finish to multiple components simultaneously, enhancing efficiency and reducing material waste.

Product Overview

Industrial Automotive Spray Painting Solution

This industrial-grade spray painting system is engineered for high-volume automotive component coating. Designed for efficiency and precision, it ensures a uniform finish on suspended parts while minimizing material waste. The system is built to support professional production workflows, emphasizing both output consistency and operator safety.

Technical Features

Application Focus	Automotive Parts, Industrial Coating, High-Volume Production
Operational Mode	Manual spray operation with suspended workpiece system

Safety and Compliance

Required Protective Gear

- Respiratory Mask
- Full-body Protective Jumpsuit
