Product Overview

High-Performance Steering Solution

This automotive power steering pump is engineered to provide reliable hydraulic pressure to the steering gear, significantly reducing steering effort for the driver. Designed to meet or exceed OEM specifications, this unit ensures optimal fit, form, and function for seamless integration into existing vehicle steering systems. It features a robust construction with precision-engineered internals, making it an ideal choice for replacing worn or damaged components.

Technical Specifications

Housing Material	Aluminum or Cast Iron
Drive Mechanism	Belt-driven
Key Features	OEM Specification Compliance, Corrosion Resistant, Precision Engineered, Integrated Reservoir

Design & Components

Included Components

- Integrated Reservoir
- Pulley
- Inlet/Outlet Ports
- Fluid Fittings

Pulley Configuration	Multi-groove for belt alignment
