

Automotive Radial Ball Bearing

This high-performance auto bearing is designed for optimal load distribution and smooth operation. Constructed with durable materials to withstand high temperatures and pressures, it ensures long-lasting reliability and reduced friction.

Product Overview

High-Performance Automotive Bearing

This automotive radial ball bearing is engineered for optimal load distribution and smooth operation in demanding environments. Constructed with durable, high-quality materials, it is designed to withstand significant temperatures and pressures while ensuring long-lasting reliability. Precision-engineered components work together to enhance overall efficiency and reduce friction, making this an ideal solution for automotive applications requiring robust and dependable performance.

Technical Specifications

Bearing Type	Radial Ball Bearing
Part Markings	LUK, 111, 058, 7477, F-202622-8
Country of Origin	China

Performance Features

Key Benefits

- Optimal load distribution
- Smooth operation
- High temperature resistance
- High pressure resistance
- Reduced friction
- Enhanced efficiency
