

# Automotive Roof Luggage Rack

This automotive roof luggage rack is designed for securely transporting luggage and cargo on vehicle rooftops. Constructed from lightweight, durable aluminum, it offers high strength and corrosion resistance.

## Product Overview

### High-Performance Automotive Roof Luggage Rack

This aluminum automotive roof luggage rack is engineered for the secure and convenient transport of cargo on vehicle rooftops. Constructed from lightweight yet durable aluminum, it provides exceptional strength and corrosion resistance for long-term reliability. Its aerodynamic profile is specifically designed to minimize wind resistance and noise, ensuring a quieter and more fuel-efficient travel experience.

## Manufacturing Process

### Production Workflow

- Extrusion molding
- Precision sawing to specific length
- Machining (stretch bending and aging)
- CNC processing
- Surface finishing (Anodizing or Electrophoresis)

## Features & Benefits

### Surface Treatment Options

Anodizing • Electrophoresis

### Key Features

Aerodynamic Design, Corrosion Resistant, Lightweight Aluminum, Integrated Mounting Points
