

Automotive Rubber Diaphragm

This rubber diaphragm is designed for use in automotive applications requiring precise pressure control. The T12 diaphragm is manufactured from durable rubber compounds ensuring reliable performance and longevity.

Product Overview

Automotive Air Brake Diaphragms

These precision-engineered rubber diaphragms are designed for critical automotive air brake systems. Constructed from a high-performance blended rubber reinforced with nylon fabric, they are built to withstand the toughest environmental conditions. Each unit is manufactured to meet stringent industry standards, ensuring consistent dimensional accuracy and reliable pressure regulation for long-term vehicle performance.

Technical Specifications

Model ID	T-12
Material Composition	Blended Rubber, Nylon Reinforcing Fabric

Performance

Manufacturing Capacity

8000000 pieces

Annual Output

Compliance and Distribution

Market Reach

- Europe
- North America
- South America
- Middle East
