

Automotive Shock Absorber for Rack Systems

This shock absorber is designed for use in automotive rack systems. It provides damping and support to ensure a smooth and stable ride.

Product Overview

Engineered for Stability

This automotive shock absorber is specifically designed for high-performance rack systems. It provides critical damping and structural support to ensure a smooth, stable ride across diverse driving conditions. Engineered to minimize vibrations, it significantly enhances overall passenger comfort and vehicle handling.

Technical Specifications

Compatibility

- Various passenger car models
- 4x4 vehicle rack systems

Application

Automotive Rack Systems

Construction

Robust construction, Vibration dampening, Extended durability
