

Automotive Steering Gear Housing

This steering gear housing is a critical component within an automobile's steering system. It provides a secure enclosure for the steering gear mechanism and facilitates attachment to the vehicle's chassis.

Product Overview

High-Precision Automotive Steering Component

This steering gear housing is a critical structural component engineered for the automotive steering system. Manufactured using high-pressure aluminum alloy die-casting, it balances high strength and rigidity with lightweight characteristics. The component is precision-machined to ensure tight tolerances and seamless integration with vehicle steering mechanisms.

Manufacturing Specifications

Manufacturing Method	High-pressure aluminum alloy die-casting
Quality Certifications	ISO9001:2000, ISO9000:1998

Technical Details

Model Marking	248-1
Material	Aluminum Alloy

Applications

Industry Compatibility

- Automotive manufacturing
- Motorcycle manufacturing
- Hydraulic control systems
- Aircraft manufacturing
- Food machinery
- Textile machinery
