

Automotive Steering Idler Arm

This steering idler arm is a crucial component in a vehicle's steering system, providing support and pivot for the center link. It is constructed from durable steel and features precision-machined mounting points and a grease fitting for easy maintenance.

Product Overview

Professional Grade Steering Component

This automotive steering idler arm acts as a critical pivot point for the vehicle's center link, facilitating smooth and responsive steering performance. Engineered from high-strength steel, the component is designed to withstand rigorous daily operation while maintaining precise alignment. It includes an integrated ball joint and a grease fitting to simplify ongoing maintenance and extend the service life of the steering system.

Technical Specifications

Material	Durable Steel
Maintenance	Grease Fitting, Field Serviceable

Quality & Compliance

Performance Standard
Meets or Exceeds OEM Specs

Key Features

- Design Advantages**
- Precision-machined mounting points
 - Durable high-strength steel construction
 - Integrated grease fitting for longevity
 - Support and pivot function for center link
