

Automotive Steering Idler Arm

This idler arm serves as a pivot point for the steering linkage in vehicles equipped with a parallelogram steering system. It provides support to the end of the center link, located on the opposite side of the steering box.

Product Overview

Steering System Component

This automotive steering idler arm serves as a critical pivot point for the steering linkage in vehicles utilizing a parallelogram steering system. Designed to support the end of the center link opposite the steering box, it ensures smooth and reliable steering performance. Constructed from high-quality materials, this component is built for durability and a long service life under demanding driving conditions.

Compatibility

Compatible Vehicle Models

- DODGE RAM 1500 PICKUP (1994-1999)
- DODGE RAM 2500 PICKUP (1994-1999)

Technical Details

Material Quality

High-grade steel • Durable finish

Function

Pivot point for steering linkage

Design Features

Black finish, Dual-hole mounting
