Overview

Automotive Suspension Control Arm

This automotive suspension control arm is engineered to provide a critical link between the vehicle's chassis and suspension components, ensuring stable handling and precise steering performance. Constructed from durable materials, it is designed to withstand rigorous road conditions while maintaining structural integrity. Each unit is precision-engineered to meet or exceed OEM specifications for fit, form, and function, guaranteeing a reliable and safe driving experience.

Technical Specifications

Compatible Part Numbers (Right)	54501-07160R, 54500-07160R, SE7411RH, 01081R
Compatible Part Numbers (Left)	54501-07160L, 54500-07160R, SE7411LH, 01080L

Key Features

Application Benefits

- Enhances vehicle stability and handling
- Connects wheel hub to vehicle chassis
- Enables controlled wheel movement
- Ensures smooth driving experience

Quality Standards

OEM Specification Compliant • High Durability
