Product Overview

High-Performance Automotive Transmission

This automotive transmission unit is engineered for reliability and efficient power transfer in vehicles equipped with 1.3L to 2.4L engines. Designed to support both manual and automatic configurations, this series ensures smooth gear shifting and optimal drivetrain performance. With a robust annual production capacity of 500,000 sets, this component is widely utilized by major vehicle manufacturers and is currently expanding into international export markets.

Technical Specifications
