

Automotive Turn Signal Switch

This turn signal switch is an essential component for controlling a vehicle's lights and signaling functions. The durable switch is made from black plastic and designed for straightforward installation across many vehicle types.

Product Overview

Automotive Turn Signal Switch

This versatile automotive turn signal switch is engineered for high reliability and seamless integration into various vehicle electrical systems. It serves as a centralized control interface, managing essential driver functions including turn signals, headlight activation, windshield wiper operations, and cruise control settings. Designed with durable black housing, this component ensures long-lasting performance and consistent communication of driver intent to other road users.

Key Features

Control Functions

- Turn signals
- Headlight control
- Windshield wipers
- Cruise control

Technical Specifications

Material	Durable black plastic
Installation	Easy installation design
Interface Markings	RES, ON, OFF
