

# Automotive Wheel Balancing Machine

This wheel balancer is designed for automotive service applications. It features a robust construction and is equipped with accessories for balancing different wheel types and sizes.

## Product Overview

### Professional Wheel Balancing Solution

The WBL-850 is a high-precision automotive wheel balancing machine engineered for modern workshops and garages. It offers comprehensive balancing modes including dynamic and static options, alongside specialized ALU functions for various rim types. Designed for efficiency and accuracy, this machine features self-calibration and diagnostic capabilities to ensure optimal performance in demanding service environments.

## Balancing Capabilities

### Available Balancing Modes

- Dynamic Unbalance
- Static Unbalance
- Static - ALU1
- Static - ALU2
- Static - ALU3
- ALU-S Function
- OPT Balance

## Operational Features

### Core Features

Self Calibration, Self-diagnostics, Automatic Sticking Weight, Hiding Indicator, Protective Hood

## User Interface

### Measurement Conversions

Parameter	Supported Conversions
Weight Units	Gram / Ounce
Dimension Units	mm / inch

## Customization

### Available Colors

Optional colors
