

# Automotive Wheel Balancing Machine

The wheel balancer is a precision instrument designed for accurately balancing automotive wheels. Operating within a voltage range of 100-120V AC or 200-240V AC at 50/60Hz, it ensures compatibility with various power systems.

## Product Overview

### Professional Precision Balancing

This automotive wheel balancing machine is a precision instrument engineered for high-accuracy performance in professional service environments. Designed for stability and durability, it helps improve vehicle handling and extends tire lifespan. The integrated digital interface and protective safety hood ensure reliable operation and user protection.

## Technical Specifications

### Safety Equipment

- Protective safety hood
- Digital measurement display

Voltage Compatibility	100-120V AC, 200-240V AC
Operating Frequency	50 Hz
Model Identifier	SBM96
