

Aviation Ground Support Vehicle

This is an aviation ground support vehicle. It is designed for transportation or maintenance purposes within an airport or aviation facility.

Overview

Aviation Ground Support Vehicle

This versatile ground support vehicle is specifically engineered for efficient operations within airport environments. Designed as a light-duty van, it offers the flexibility required for both passenger transport and cargo logistics. Its compact design ensures excellent maneuverability, making it an ideal solution for crew movement, equipment delivery, and various logistical support tasks on the tarmac.

Key Features

Vehicle Configuration

Light-duty Van • Multi-purpose

Primary Applications

Crew Transport, Cargo Logistics, Airport Operations, Maintenance Support
