

Axial Fan for Paper Machinery Ventilation

This axial fan is designed for ventilation and air circulation in paper production machinery. It features four curved blades for efficient airflow and a durable frame with mounting holes.

Product Overview

Industrial-Grade Ventilation

This square-framed axial fan is engineered specifically for the demanding environments of paper machinery ventilation and air circulation. Featuring a robust four-blade curved design, it ensures consistent and efficient airflow to maintain optimal operating conditions. Built with high-strength materials and a reinforced frame, this unit is designed to provide reliable performance in heavy-duty industrial applications.

Technical Design

Blade Configuration	4-blade curved design
Frame Type	Square-framed
Installation Features	Mounting holes, Secure installation

Construction

Construction Materials

- Durable metal or high-strength plastic frame
- Reflective central hub (chrome/polished steel)

Application

Intended Application

Paper Machinery • Industrial Ventilation • Air Circulation
