

Axial Fan for Refrigeration and Ventilation

High-efficiency axial fan designed for refrigeration and ventilation applications. It features robust construction with a protective wire guard and aerodynamically optimized blades for maximum airflow.

Product Overview

High-Efficiency Airflow Solution

This axial fan is expertly engineered for intensive refrigeration and ventilation applications. It features aerodynamically optimized blades that ensure maximum airflow efficiency while maintaining quiet operation. Built with robust materials and a protective wire guard, this unit provides long-lasting reliability for demanding cooling systems like condensers and evaporators.

Key Features

Core Benefits

Aerodynamic Design, Quiet Operation, Robust Construction, Long Service Life, Protective Wire Guard

Application

Suitable Environments

- Refrigeration systems
- Condensers
- Evaporators
- General ventilation
