

Axial Flow Fan for Refrigeration

High-efficiency axial fan designed for refrigeration and ventilation applications. It features aerodynamically optimized blades for maximum airflow and reduced noise.

Product Overview

High-Efficiency Axial Ventilation

This axial flow fan is engineered for high-performance in refrigeration and ventilation applications, including use in condensers, evaporators, and heat exchange systems. Featuring aerodynamically optimized blades, the unit is designed to maximize airflow while effectively minimizing noise levels. Its robust construction ensures long-term reliability and durability even in demanding industrial environments.

Safety and Design

Protection Features

Protective Guard, Debris Prevention, Durable Build

Applications

Suitable Applications

- Refrigeration systems
- Ventilation equipment
- Condensers
- Evaporators
- Heat exchange systems

Product Options

Availability

Various Sizes • Various Voltages
