

Axial Ventilation Fan

This high-efficiency five-blade axial fan is designed for optimal air movement in ventilation and exhaust systems. The blades are aerodynamically shaped to maximize airflow while minimizing noise, and the center hub allows secure mounting to a motor shaft.

Product Overview

High-Efficiency Axial Fan

This five-blade axial ventilation fan is engineered for optimal air movement in diverse exhaust and ventilation systems. Its durable construction ensures long-lasting performance, while the aerodynamically shaped blades maximize airflow efficiency and minimize operational noise. Designed for versatility, it is an ideal component for household appliances, air conditioning units, and specialized ventilation equipment.

Technical Specifications

Number of Blades	5
Mounting	Motor shaft center hub

Application Suitability

Suitable Applications	Household Appliances, Air Conditioners, Ventilation Systems, Exhaust Systems
-----------------------	--

Performance Features

Key Benefits

- Aerodynamic blade design
- High-efficiency airflow
- Low noise operation
- Durable construction
