

Backlight Inverter for LCD Monitors

These inverters are designed for computer monitors. They feature multiple transformers and supporting circuitry for efficient and reliable power conversion to drive the backlight illumination.

Product Overview

High-Performance Backlight Inverters

These high-performance backlight inverters are specifically engineered for LCD computer monitors. Featuring a robust design with multiple transformers and specialized supporting circuitry, they ensure efficient and reliable power conversion to drive backlight illumination. Optimized for various screen sizes and power requirements, these components are built to provide consistent brightness and a long operational lifespan.

Technical Specifications

Included Components

- Transformers
- Capacitors
- Resistors
- Integrated Circuits
- Printed Circuit Board (PCB)

Application Compatibility

LCD Monitors, Various Screen Sizes

Performance

Key Performance Metrics

1 High

Reliability

1 Optimized

Efficiency
