

Ball Joint Mounting Bracket

This metallic component features a ball joint on one end and a flat, rectangular body with two circular apertures. The apertures are evenly spaced and appear to be designed for mounting or connection purposes.

Product Overview

Professional Ball Joint Mounting Bracket

This high-quality ball joint mounting bracket is engineered for precision and durability in industrial applications. Featuring a robust metallic construction, it integrates a versatile ball joint with a secure, flat rectangular mounting plate. Designed with two circular apertures, this component ensures stable installation and seamless alignment for complex mechanical assemblies.

Technical Specifications

Design Features	Metallic construction, Integrated ball joint, Dual-aperture mounting
Mounting Configuration	Flat rectangular mounting plate with two circular holes
Surface Finish	Smooth machined finish
