

Banjo Axle Straightening Machine

This machine improves efficiency using servo and transmission technology. It achieves high straightening precision, reaching up to 0.01mm.

Product Overview

Precision Axle Correction

The Banjo Axle Straightening Machine is a high-performance solution engineered specifically for the automotive industry to ensure axles meet strict tolerance standards. Designed for both repair shops and manufacturing facilities, it combines robust mechanical construction with an advanced control system for reliable, high-precision straightening. The system prioritizes operator safety and ease of use, delivering efficient correction processes that minimize the risk of axle damage.

Key Features

Operational Benefits

- User-friendly interface for easy operation
- Advanced monitoring capabilities
- Integrated safety features for operator protection
- High-reliability performance

Core Capabilities

High-Precision, Automotive Axle Correction, Robust Construction, Advanced Control System
